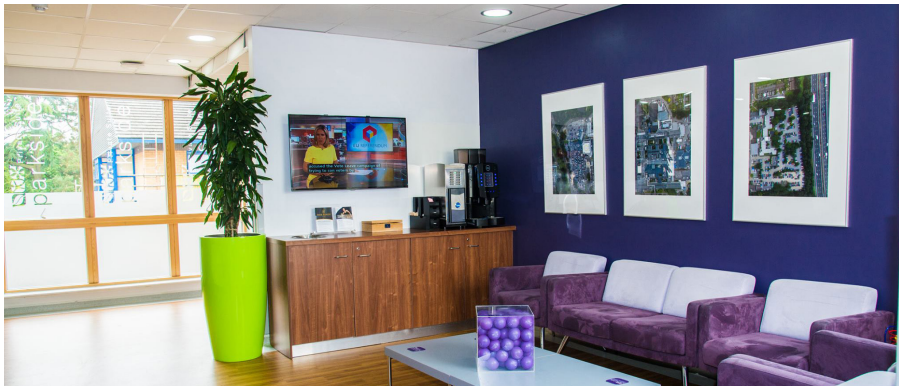
FPH Parkside Private Suite

LOGAN CONSTRUCTION

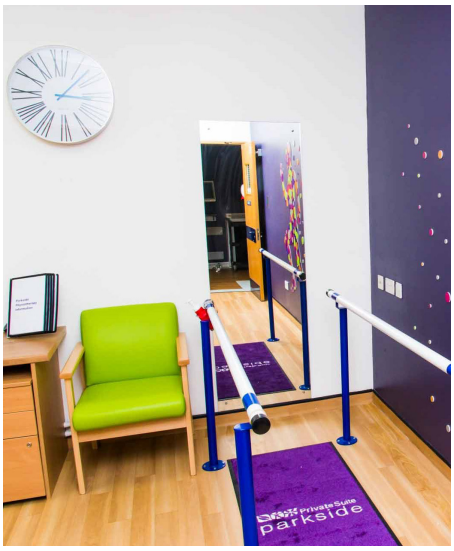
Healthcare / Refurbishment

Key Features:

- Benchmark quality refurbishment to Private suite
- Five-phased programme
- Used in the Trust's marketing campaign



This project comprised the refurbishment of the Parkside Private Suite, located on the 2nd floor the Nucleus Building.



We were tasked with revitalising the Trust's private healthcare facility. Within the scope were targeted updates to the care, communal, staff and reception areas. This included providing new ceilings, new flooring, new lighting, new nurse desks and an extension to accommodate the Trust's new 'welcome' reception area.

Intelligent phasing to enable continued use of facilities

The works were phased in order to allow for the use of as many bed spaces as possible during the works. Prior to commencement, we agreed five clear phases and programmed them into an intricately coordinated decant / recant period.

In order to safeguard the Hospital users, each work area were robustly segregated from other live ward areas. This included implementing temporary solid hoardings, digi-locks and signage.

Upon completion of phase one, as well as each phase thereafter, works only commenced once users were decanted into finished areas. This ensured the care offering was not adversely effected throughout our works programme.

Marketing suite quality finish

As the Trust was looking to renew their marketing scheme for their private care offering, the overall finish of the works areas was required to be of the highest standard.

To this end, we worked with the Trust through design workshops, weekly reviews and quality demonstrations to ensure they were satisfied with the benchmark finishes provided.

Client:	Frimley Health NHS Foundation Trust
Project Value:	£250,000
Programme Duration:	14 weeks
Architect:	Frimley Health NHS Foundation Trust
Quantity Surveyor:	Blythe Ross Partnership
