Evelina Children's Hospital

Healthcare / Refurbishment

Key Features:

- Intricate refurbishment of the Outpatients department
- Works with a 'live' Children's Hospital
- Award-winning design

As the second largest provider of children's services in London, the Evelina Hospital Outpatients was critical to ensure improved functionality. Project requirements were refurbishment and remodelling of the existing facilities to provide a new contemporary outpatients space.

Works included the refurbishment of the ground floor main desk and remodelling of existing side rooms. These side rooms would be transformed into four new consultation rooms, designed for children's admissions.

Further responsibilities included remodelling the existing layout, providing new fixtures, finishes and M&E installations, as well as relocating several existing functional areas.

Working within a 'live' Children's Hospital

Owing to the fully operational departments adjacent to our site area, we robustly coordinated the works to safeguard these critical areas. At all times, the impact of our activities on nursing and patient wellbeing was viewed as our primary concern.

Moreover, directly employed and subcontracted employees held DBS documentation. This was vital owing to the nature of the Hospital and the vulnerable patients within. When required, we liaised with the client's Project Manager to provide them with a database of onsite operatives and their clearance details.

Delivering an award-winning design

During our delivery, we engaged in pre-commencement meetings with key parties to coordinate a design which was both desirable and deliverable. Our strategy involved bringing together the client, AD Architects and specialist artists 'Art in Site' to provide an inspirational piece of interior design. This was highly commended at the European Healthcare Design Awards 2017.

Client:	Guy's and St. Thomas' NHS Foundation Trust
Project Value:	£250,000
Programme Duration:	15 weeks
Architect:	AD Architects
Quantity Surveyor:	Essentia
