GSTT Paediatrics Unit

LOGAN CONSTRUCTION

Healthcare / Refurbishment

Key Features:

- Phase 3A of our A&E refurbishment at St. Thomas Hospital
- Intricate decant/recant strategy
- 'Live' Hospital setting

Completed within a live environment, we undertook the complex multi-phased refurbishment and extension of St. Thomas' Hospital's Accident and Emergency Department.

Phase 3A saw us deliver a new paediatric unit, as well as refurbishing the urgent care centre and triage area. The new paediatric unit included fully refurbished reception, seven diagnosis/care cubicles and six bed areas.

We worked with the client to bring a welcoming, calming and friendly atmosphere to the newly refurbished paediatric unit. This included delivering an innovative interior design, including colourful wall displays aimed at children.

Intricate decant/recant strategy

As part of our enabling works for this phase, we provided the Trust with a temporary paediatrics reception, waiting area, diagnosis/care cubicles and bed area. This enabled the decant of patients, staff and visitors into this temporary area, prior to works commencing on the new paediatric facility. Once works in the new area were complete, we worked with the estate and Department Heads to coordinate a successful recant to ensure continued and uninterrupted use of these vital child care facilities.

Delivering adjacent to critical departments

Throughout the multi-phased project, we were working adjacent to sensitive equipment including MRIs, CTs, X-rays and Ultrasounds. Therefore, it was essential we caused minimal disruption within the hospital.

Continual liaison was a critical aspect of our approach throughout, and weekly meetings were conducted with all relevant parties to discuss the forthcoming works and how these could best be approached considering the requirements of all stakeholders.

Client:	Guy's and St. Thomas' NHS Foundation Trust
Project Value:	£2,500,000
Programme Duration:	12 weeks
Architect:	ADP Architecture
Quantity Surveyor:	Essentia
