HUH Endoscopy & Positive Lives

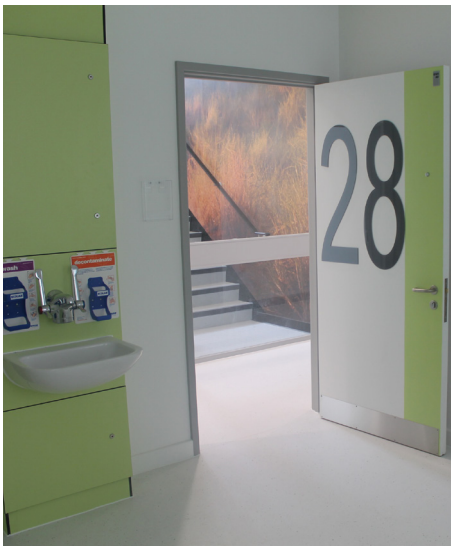
LOGAN CONSTRUCTION

Healthcare / New Build and Refurbishment

Key Features:

- Phased new build and refurbishment projects
- Delivered within a 'live' healthcare environment
- Intricate M&E works robustly coordinated

This project combined a new build and refurbishment approach to deliver a new advanced Endoscopy suite and Positive Lives clinic at Homerton Hospital.



New Endoscopy Suite

In this project, three new procedure rooms, twelve en suite recovery bays and auxiliary areas were provided to revitalise the Hospital's care offering.

Split into four phases, coordinated to ensure continued use of the facility outside our works area, we delivered:

- Installation of hoarding around the area to include dust barriers
- Erection of external scaffolding and winch system for access to site and for the movement of materials
- Minor demolition works
- Installation of new sanitaryware
- Creation of new access corridor
- Installation of new air conditioning unit to 3rd floor
- Redecoration works

Our phased approach required clear sequencing and close collaboration to integrate the high volumes of M&E required into the project.

Positive Lives Clinic

Homerton University Hospital's Positive Lives Clinic provides sexual health outpatient care. As part of this project, we delivered a new one-storey and two-storey extension, as well as interior refurbishment package.

Owing to these works, the clinic was transformed through a modernised entrance, reception, consultant area, treatment rooms, office facilities and new roof. Roof lights were incorporated and together with large modern wall murals give a bright welcoming atmosphere to the clinic.

Client:	Homerton University Hospital NHS Foundation Trust
Project Value:	£3,100,000
Programme Duration:	68 weeks
Architect:	Hunters architects
Quantity Surveyor:	Baily Garner (Endoscopy Suite) and Randall Simmonds LLP (Positive Lives)
