COVID-19 Improvement Works

LOGAN CONSTRUCTION

Healthcare / Refurbishment

Key Features:

- COVID-19 protective safeguards installed
- Fast-track programme during complex industry conditions
- Across five Hospitals

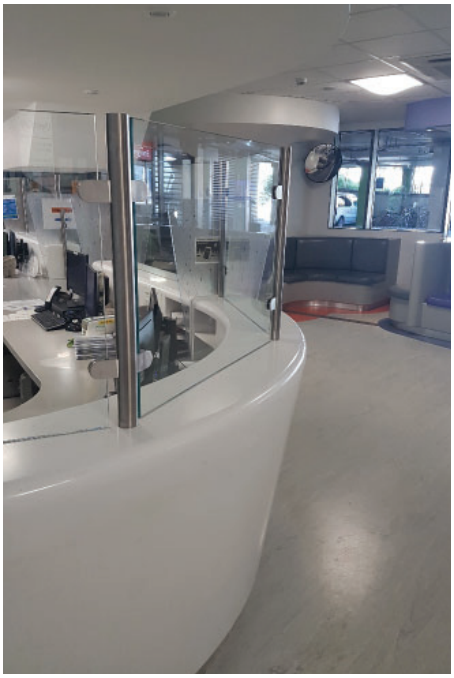
Owing to our long-lasting relationship with the Trust, comprising numerous examples of delivering reactive works to fast-track programmes, we were appointed to provide bespoke upgrades to ensure a number of their Hospitals had effective COVID-19 adaptations.

COVID-19 protection

Following an internal review by the Trust's Estates team, a project brief detailing the critical need to improve COVID-19 safeguards across public-facing areas was confirmed.

Once we were appointed, we were responsible for the survey, supply, installation and commission of a multitude of COVID-19 segregation screens.

Working tirelessly with our approved supply-chain, we were able to source the post-mounted toughened glass screens and associated fittings within the challenging overall programme duration. Following the fast-track procurement of these protective screens, we installed them within several public-facing areas in the Trust's estate. Primarily they were installed within reception areas , all whilst the associated departments were occupied and operational.



Delivering a fast-track programme during the pandemic

Programme was critical within this project. As we were delivering whilst the pandemic was still at its peak, it was vital that the Trust had these bespoke COVID-19 protective upgrades in place as quickly as possible.

Through robust coordination of our dedicated supply-chain, as well as the retained experience our directly employed management, we were able to deliver the entire project within just three weeks.

Works to numerous Hospitals within the Trust's estate

These works were delivered across five Hospitals. Thanks to the experience of our delivery team working with the Trust, we mitigated the risk of concurrent construction, in a fast-track programme, across multiple Hospitals.

Client:	Royal Free London NHS Foundation Trust
Project Value:	£100,000
Programme Duration:	3 weeks
