Hornsby House School - Summer 2023

LOGAN CONSTRUCTION

Education

Key Features:

- Fast-track project
- Refurbishment and Reconfiguration
- Repeat business

We are thrilled to have been invited back to Hornsby House School in 2023 for further refurbishment works over the summer holidays.

This year, we were tasked with completely renovating three classrooms and the adjacent hall in the Lower School Building in just an eight week period.

The use of color is absolutely stunning throughout, with cream, green, and blue shades used predominantly in the classrooms, with large, multicolored acoustic shapes suspended from the ceilings.

The hall boasts a sky blue ceiling with hanging clouds and a small wooden stage, four wooden houses with soft foam seating and a beautiful tree for decoration. The children can write and draw on the whiteboard behind the tree to their heart's content.

The old style radiators in all the rooms have been covered with bespoke wooden radiator covers and matching wooden bookcases also added, whilst the parquet flooring in the hall area has been sanded and restored so it is looking beautiful once more.

Alongside these works, the services installations were modified and brought up to date for current purposes including power, data, lighting and heating system improvements.

Client:	Hornsby House School
Project Value:	£200,000
Programme Duration:	8 weeks
Architect:	Dinwiddie Maclaren Architects
