Norton Knatchbull School

Education / Refurbishment and External Works

Key Features:

- Refurbishment of reception areas
- New roofing, cladding and glazing
- Significant environmental improvement delivered

Logan undertook the refurbishment and upgrading of Norton Knatchbull School to deliver updated and modern buildings for current and future students.

The works to the school included new roofing, cladding and glazing to not only revitalise the aesthetics but to improve the environmental performance of the buildings too.

Other elements of the work included refurbishing the reception area to provide a bright new entrance to the school for students and visitors alike.

Maintaining operational teaching areas

This was a key concern of the School. We understood this and worked with their team in the early stages to agree our proposals on keeping key areas operational.

We installed internal hoarding in designated areas to ensure works could progress in synergy with the agreed Programme. This hoarding was vital to ensure the safety of students and the continued operation of key rooms.

Furthermore, we agreed an intelligently phased Programme of works with the client. This programme, delivered in four distinct phases, ensured key areas of the school could remain operational and not interrupt the vital learning pathways of the pupils.

Out-of-hours working to safeguard learning

We worked around the School's calendar to undertake potentially noisy works outside important periods in the terms, such as exams. Certain areas, such as the Music Room and Computer Rooms, had work done exclusively out-of-hours to ensure as minimal disruption to the adjacent areas as possible.

Client:	The Governors of Norton Knatchbull School
Project Value:	£2,000,000
Programme Duration:	52 weeks
Architect:	Nick Perry Associates
Quantity Surveyor:	Betteridge & Milsom
